THE FIRST ULTRA LOW ENERGY DRYER.

Desiccant

ULTRA

\$7,128*

\$634*

ANNUAL COST TO DRY MATERIAL*

DESICCANT dryers recirculate hot air for hours, which is energy intensive and slow. Regeneration then wastes even more energy.

ULTRA uses Vacuum to lower the boiling point of water to 133°F / 56°C. Moisture boils off quickly with **NO ADDITIONAL ENERGY**.

Unlike Desiccant dryers, **ULTRA** dryers remain energy efficient at reduced throughputs.

The perfect blend. Every time.

On the fly Color Changes. PDQ.

There are a lot of features that distinguish a Plastrac blender, but none greater than the ability to change colors as often and as quickly as customer orders demand it. The secret is our patented level-sensing vane switch (standard on every single blender). Harried processors can hurry up color changes by swapping top castings without any need for cable removal.
